

# DESY Seminar

Tuesday, 04.03.2008, 17h

DESY Hörsaal

## Neutrinos

- Results and Future -

Boris Kayser

(Fermilab)

We review what has been learned from the experiments on neutrino oscillation, including the latest experimental results. The discovery that neutrinos oscillate has raised some very interesting questions about the neutrinos and their relations to other areas of physics. We identify a number of these questions, explain why they are important, and discuss ways of answering them through future experiments.

- **Tea and cookies will be served at 16.45h in the lobby**
- **After the seminar there is a chance for private discussions with the speaker over wine and pretzels**
