

DESY Seminar

Tuesday, 13.11.2007, 17h

DESY Hörsaal

An Excursion into Tau-Physics

Carsten Hast (SLAC)

After a few historical remarks about the discovery of the tau lepton the current status of its properties is presented. Subjects covered will be: mass, lifetime and lepton universality, hadronic decays and their implications for the measurement of the anomalous magnetic moment of the muon, and lepton flavor violating processes.

- **Tea and cookies will be served at 16.45h in the lobby**
- **After the seminar there is a chance for private discussions with the speaker over wine and pretzels**
