

HERA Run Week #5

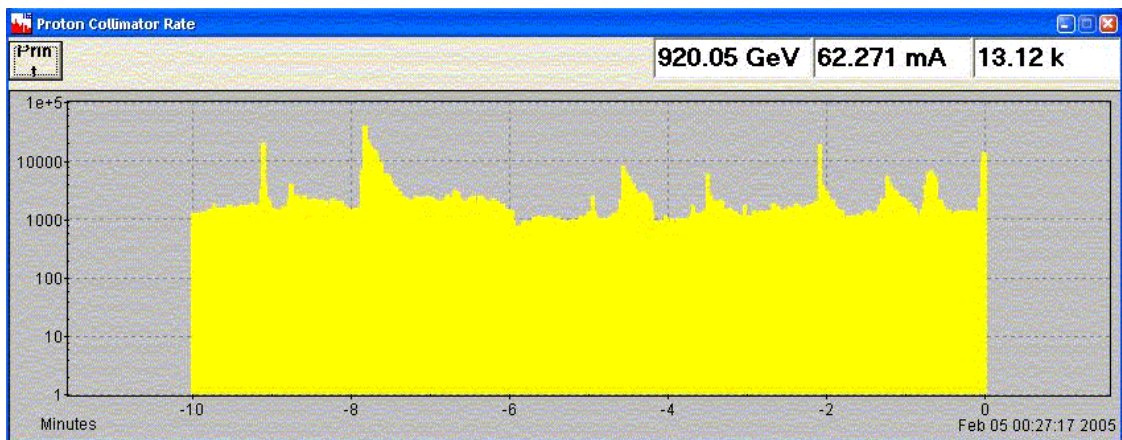

7 Luminosity runs,
starting after an access day on 1-2. Feb
machine studies period on 3 Feb.

Background Situation:

Proton backgrounds still fluctuating. The real “spike events seem to have gone after repair of powersupplies.

The situation further improved after disabling the collimator jaw “WL150 up”.

Interesting Electron Spike Event:

Brakedown of e- lifetime for 55 minutes without evidence for a technical problem
