

Plug Electron ID using Artificial Neural Network Techniques

Yves Kemp, Thomas Müller,
Hartmut Stadie, Wolfgang Wagner
University of Karlsruhe

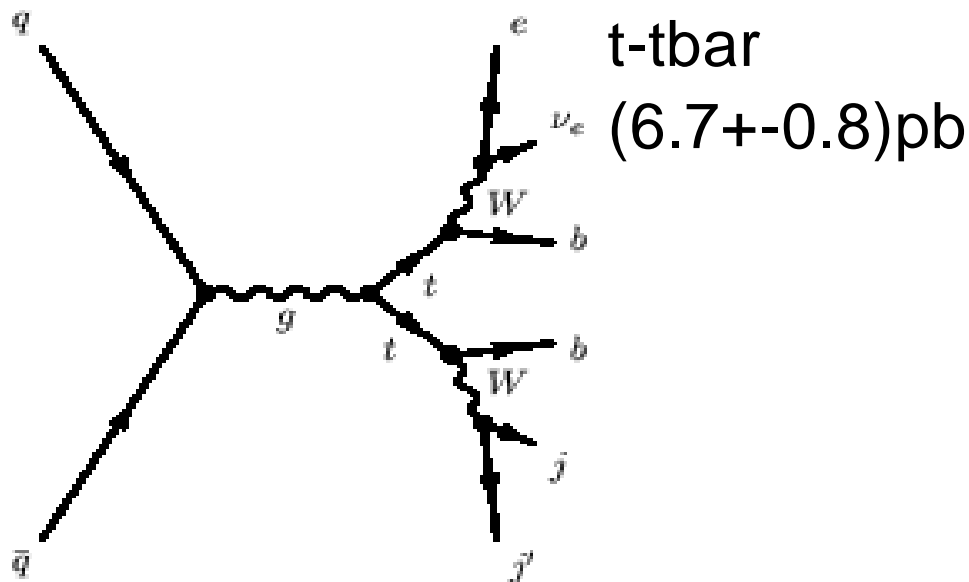

Paris, RTN meeting

September 2004

Signal and background processes

s-channel
(0.88±0.05)pb

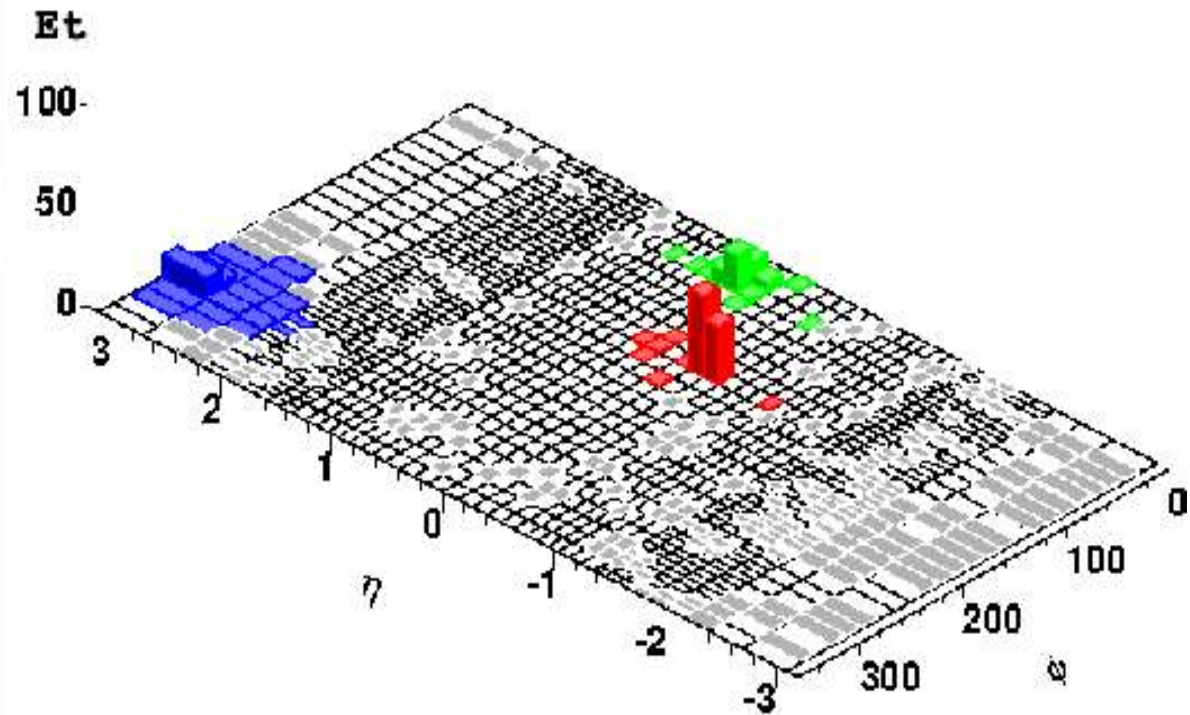

W-b-bbar

Signature

- ◆ $W + 2 \text{ jets} \rightarrow \text{b-tag}$
- ◆ $W \rightarrow e/\mu + \text{neutrino}$
- ◆ Electron-ID
- ◆ Run I: Only central electrons
- ◆ Run II: Also electrons in forward calorimeter

Event: 417076 Run: 67564 EventType: DATA Inpres: unknown Presc: unknown

Missing Et
Et=41.8 phi=4.4

Electron ID in for single top now

Limit for single top quark production: t-channel < 10.1 @ 95% C.L

Now: Only central electrons

t-channel MC

(electrons after single top preselection)

Ca 30% with $|\eta| > 1.1$

Variables for plug electron ID

- ◆ Fiducial cut: $1.2 < |\eta| < 2.8$
- ◆ EmE_{τ}
- ◆ HadE/EmE (sliding cut)
- ◆ Isolation Ratio
- ◆ PEM χ^2 (comparison with test beam data)
- ◆ PES 5by9 u/v (Shower profile in PES in u and v direction)

Selection of the samples

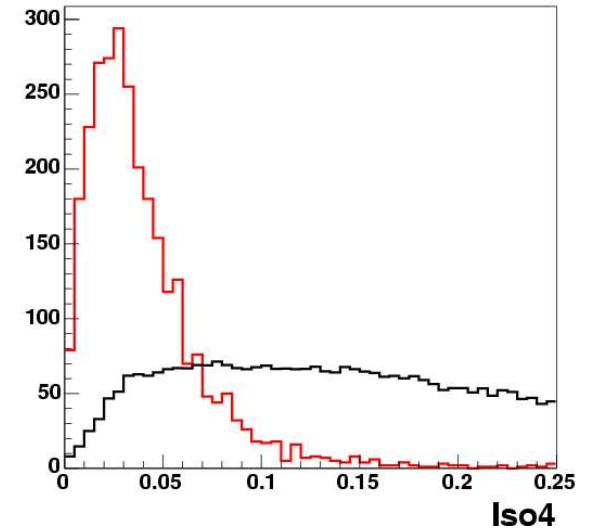

- ◆ Signal sample:
 - ◆ 1 tight central electron
 - ◆ Another electron candidate in plug (Z-Candidate)
 - ◆ Cut to be independent of trigger cuts
 - ◆ ~3000 events remain
- ◆ Background sample:
 - ◆ 2 balanced jets (1 central, 1 plug)
 - ◆ Several preselection cuts
 - ◆ ~70000 events remain

Both samples taken from data! (bpe108)

Control plot: E_T of plug electron

Selection variables

----Signal ----Background

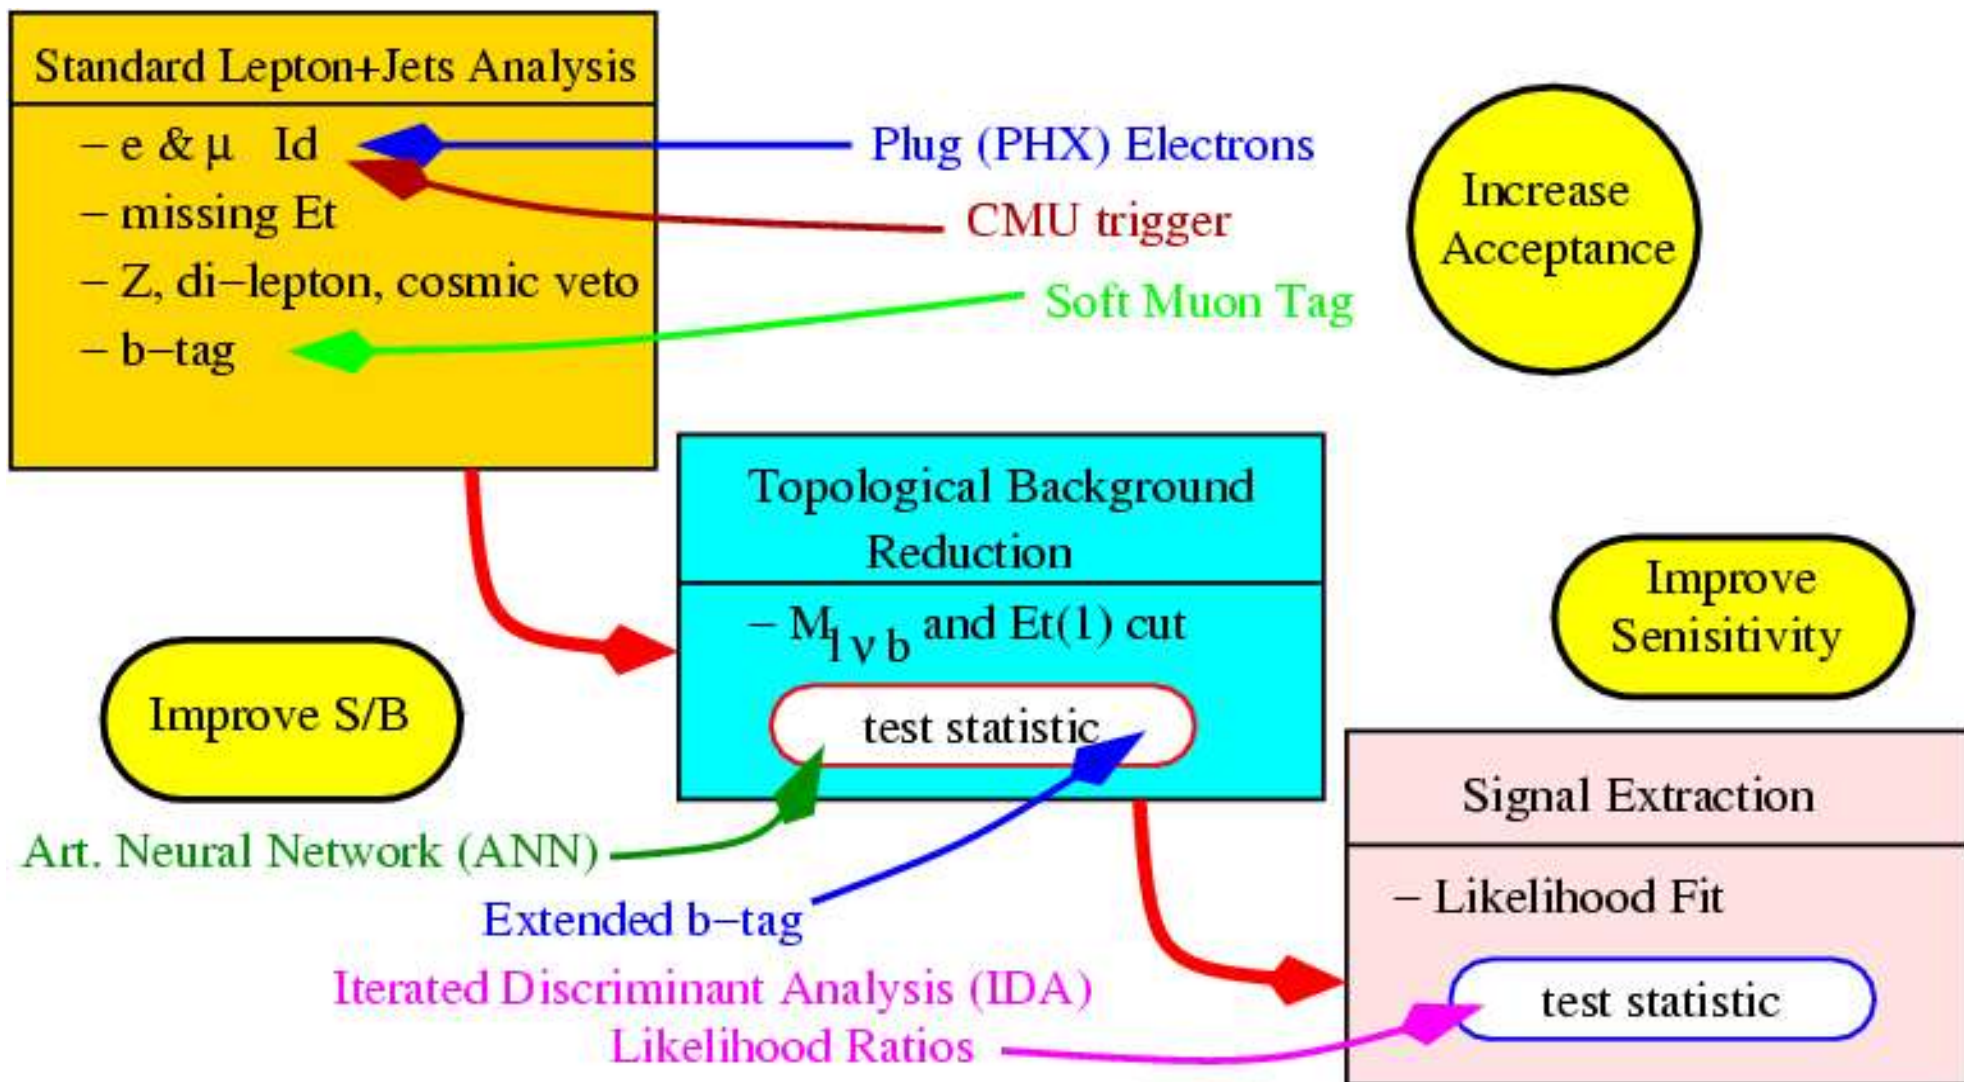

Correlation matrix

	Target	HadEm	Iso	PEM chi2	PES 5/9 u	PES 5/9 v
Target	100.0%	-49.4%	-66.6%	-64.5%	42.9%	43.2%
HadEm	-49.4%	100.0%	52.8%	44.8%	-24.8%	-24.2%
Iso	-66.6%	52.8%	100.0%	71.0%	-38.9%	-38.5%
PEM chi2	-64.5%	44.8%	71.0%	100.0%	-42.8%	-43.3%
PES 5/9 u	42.9%	-24.8%	-38.9%	-42.8%	100.0%	45.9%
PES 5/9 v	43.2%	-24.2%	-38.5%	-43.3%	45.9%	100.0%

Target is -1 for background, 1 for signal

Correlation between the two PES variables due to cross talk and geometry

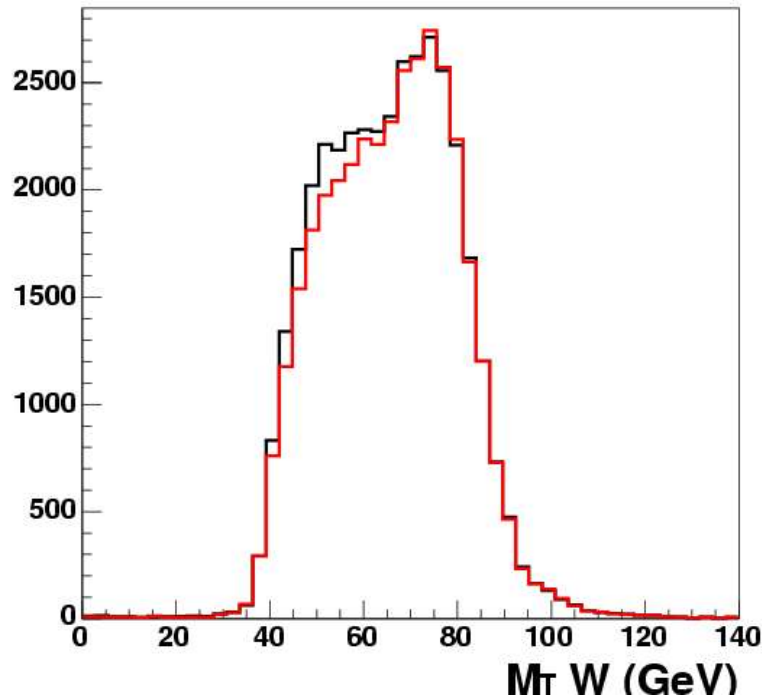

Artificial Neural Network

- ◆ 5 variables
 - ◆ Had/Em
 - ◆ Isolation
 - ◆ PEM chi2
 - ◆ PES 5/9 u/v
- ◆ 10 nodes in intermediate layer
- ◆ Binary classification (-1 background, 1 signal)
- ◆ 200 iterations

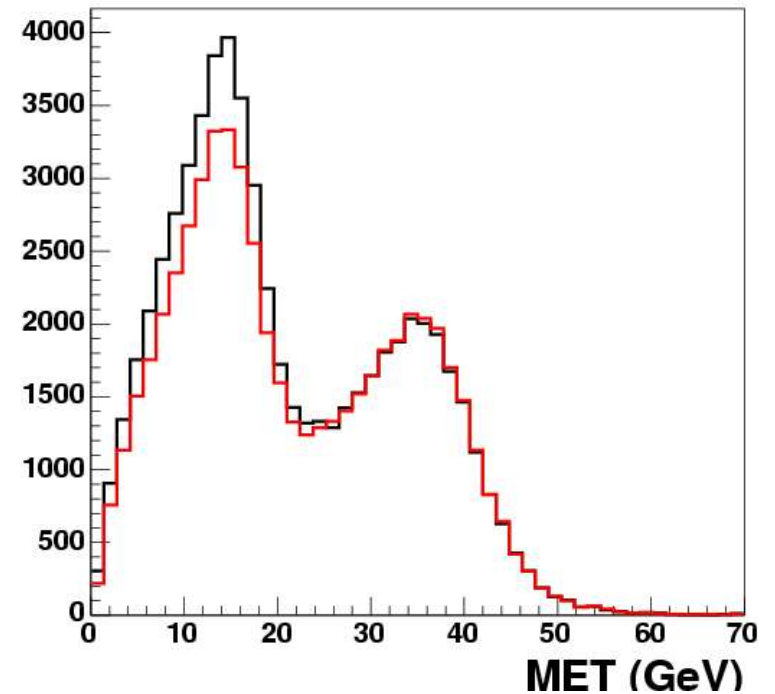

NN cut	Signal	Background
0.23	84%	4.6%
0.16	91%	5.3%
Cutbased:	84%	5.3%

Independent tests

Transverse W-Mass
(MET > 15 GeV)
NN cut: 36355 events
CDF tight: 37687 events

Missing ET
NN cut: 40291 ev. < 25 GeV
CDF tight: 34949 ev. < 25 GeV

Conclusion, outlook

- ◆ Correlations between selection variables
- ◆ ANN can improve selection and ID
- ◆ Good performance also on independent tests

- ◆ Can be used for electroweak physics
- ◆ Will be used in the next round of single top analysis
