Features in WHIZARD 2

► Physics

- ▶ cascade decays -> inclusive production w/ full correlations
- ▶ cuts/trigger, scale setting, matrix element reweighting, histograms: arbitrary expressions possible
- ▶ flavor sums initial + final state (e.g. jet = quark:gluon)
- ▶ Parton shower (complete ISR/FSR; by Sebastian Schmidt)

► Technics

- ▶ WHIZARD as a shared library
- ▶ Unified user interface: process configuration, compilation, cuts, integration, simulation
- ▶ Methods for user interface: input file, interactive shell, command line, library calls (e.g., from C); GUI foreseen
- ▶ Native HepMC support (+ LHEF, StdHEP, HEPEVT, etc.)

► Development

- ▶ Under development: Broader physics support, especially QCD
- ▶ Underlying event
- ▶ Parton shower matching
- ▶ Dipole subtraction / NLO (GOLEM interface)
