

PhD Candidates

The Soft Condensed Matter at HASYLAB is a small group interested in structural aspects of such materials, using mostly Small and Wide angle scattering, DSC and polarizing optical microscopy. Other techniques are available through collaborations. We have some projects to be carried out by graduates aiming at a PhD degree.

Candidates interested in *lipid model membranes and their structural aspects upon interaction with guest molecules* should send a short CV and a description of previous experience and future wishes.

They shall be considered and will be contact for further details.

HASYLAB has an excellent infra-structure to guarantee the successful development of such projects.

Salary and other working conditions will depend on the candidate and will be discussed in detail on an individual basis. English is our working language.
