Overview of the ZEUS Detector  
(longitudinal cut)

# FORWARD PRESAMPLER

- Measurement of energy degradation
- Layer scintillator tiles
- Combined with the calorimeter allows to measure the event-by-event energy loss

Front view of FCAL, the shade region corresponds to the FPRES

# DATA SELECTION

- ZEUS data from 1999
- Proton-dissociative  $J/\Psi$  production
- Statistic high enough for energy deposit in forward direction
- Background events for  $J/\Psi$  production are also used in this analysis

# FORWARD PRESAMPLER

## hit map

# EVENT SELECTION

- Vertex located near the interaction point
- The first ring around the pipe ( $r=40\text{cm}$ ) not used
- Only forward calorimeter and presampler data
- One track events

- FPRES at ZEUS
- Events with only one forward track
- Minimum distance between track hit in FCAL and FPRES hit
- No mapping problem found!!! ... for the moment
